

Portable Selfservice Station

The Portable Selfservice Station (PSS) is our own designed and produced selfservice unit that can be used for all participant selfservice tasks during your event. The PSS has a table top design which allows for easier transport and setup, while providing a recognisable profile so your participants will easily recognise where they need to go.

Our redesigned onsite registration software for the PSS aims at providing a quick, full featured and easy to use interface for your participants. They can handle all registration tasks themselves, whether your participant is pre-registered and only needs to print his/her badge, needs to pay for an onsite registration or wishes to register for additional entitlements.

Other selfservice tasks like e.g. certificate printing or attendance control are also possible, contact us for more details.

Optionally we can provide a counter that has specifically been designed for the PSS. The counter is about 1 meter high and has paper pass-through slots in the front so the printer can be placed out of sight. The front and side panels are replaceable and can be changed to display your logo or branding, contact us for available options.

Technical details:

Screen size	21.5", 55cm (1920x1080 pixels)
Touch technology	Capacitive
Processor	6 th generation Intel Core processor
Storage type	SSD
Supported barcodes	1D & 2D
